

Work plan association

- Draw up and constantly update the list of jointly implemented open projects aimed at creating semantically compatible applied and instrumental intelligent systems.
- Develop and continually improve a standard for intelligent systems to ensure their compatibility.
- To develop technology for designing compatible intelligent systems.
- To increase the efficiency of interaction with organizations that support the implementation of open source projects aimed at creating semantically compatible intelligent systems.
- To raise the level of practical significance of the OSTIS international conferences, held annually in February, turning the conferences into an annual constructive communication of all active participants in open projects supported by the Belarusian Association of Artificial Intelligence Specialists.
