

# Functions and directions of activity ESA –AI

1. The main functions of ESA –AI are:

1.1. Coordination of educational activities in terms of teaching

disciplines and including models, methods and means of artificial intelligence

1.2. Coordination of scientific activities in terms of future development

artificial intelligence issues

1.3. Preparation of proposals for making management decisions in

parts of improving artificial intelligence technologies and development

engineering infrastructure for the commercial implementation of models, methods and means of artificial intelligence, the creation of artificial intelligence systems for the commercial use of the latter in the sectors of the national economy, education, science and culture.

2. The main activities of the ESA –AI:

2.1. Improving the educational process

2.2. Joint research

2.3. Joint improvement of artificial intelligence technologies and

development of engineering infrastructure.

2.4. Promotion of models, methods and means of artificial intelligence

for commercial use in sectors of the national economy; education, science and culture.
